Department	Product Design (FT-2012)		
Mentor(s)	H. S. Lohit and Chiranjith Barui		

The future is something that we all look forward to. Hope and positive development is what come to mind when we think of the future. We have taken this as a task upon ourselves to bring about a change to the existing Bus Stands that are ever so monotonous in our city Bengaluru.

Our concept wanders away from the existing and somewhat functional rectangular shapes. Our concept builds upon the tagline for Bengaluru, 'Garden City of India'. Well, the gardens are all mostly gone and the future doesn't look that great, so we decided to use a tree, flowers as our metaphor and build our concept based on that.

This is our first project on 'Design of Futuristic Bus Stand for Bangalore City'. We plan on improving a lot of things in this and we hope that it will one day be a part of this great and amazing city. The materials can be changed with the base and center pillar can be made of fiberglass/plastic composite to save cost during mass production. The material for the leaves can be changed to water proof composites where the material doesn't get heated during summer.

The design can be used as a stack, with minor modifications and multiple structures can be installed side by side according to the area and the density of passengers. It can also be moved easily if necessary, using specially made tools that are tamper proof. This design can also be improvised and further used as park furniture or in hotels and restaurants.

Design process for futuristic bus stand
