ADMISSIONS OPEN FOR 2020-2021

**Ph.D. in
Public Health**

Faculty of Life and Allied Health Sciences

Despite vast progress in health and development, public health inequities continue to exist within and between the regions across the world. Rising non-communicable diseases, epidemic outbreaks at regular intervals that translate into pandemics, preventable causes of deaths of adolescents, mothers and children continue to attract public health attention for many more decades to come. Saving lives as well as enhancing quality of life with a focus on interventions that address gaps in equity and quality are the need of the hour. RUAS has a strong Master's program in Public Health, taught by experienced faculty of national and international repute; has collaborated with the local stake holders – Government and civil society as well the global health partners that enhances learning experience of the masters and doctoral students. Building on that, doctoral courses are offered that aim to answer the questions pertaining to local, national and global public health challenges.

Research Themes/ Categories

Public Health Programs: Studies can focus on how to reduce inequities, enhance the access, quality and coverage of the national health programs:

- Non communicable disease
- Reproductive and Child Health
- Infectious diseases, etc.
- Mental Health
- Cancer prevention
- Primary Health Care

Public Health Research Methods:

- Innovations in Program Monitoring and Evaluation
- Program Monitoring
- Program Evaluation
- Epidemiology
- Program Science
- Implementation
- Mixed Methods
- Surveillance

Public Health Interventions: Studies may focus on scalable and sustainable interventions, methods and tools to enhance

- Quality of Care
- Quality of life
- Integrative Health
- Health behaviour and Promotion
- Social determinants in Health
- Community ownership and empowerment
- Prevention to Care continuum
- Convergence of Sustainable Development Areas

We particularly encourage in our doctoral programs:

- Multidisciplinary and collaborative research
- Application of technology
- Synergy between the public and private sector
- Health systems strengthening
- Convergence between Health and other sustainable development goals

Inspiring Applied Thinking
